Seeds and Plants: Growing plants is TOPS!!

Tricia Hahn

This hands-on science summer camp is designed to let your child explore and experiment with the world of growing plants. We will sprout and experiment with radish seeds, observing how they develop and grow. We will study the effects of light and darkness on the germination and growth of radish seeds. We will experiment with crowding the seeds and see how that affects the plants' health. We will build a miniature greenhouse, make predictions about how the seeds will grow in different environments and then create those environments to test our hypotheses. Growing plants is TOPS!!

Materials Needed: Pencils and a Happy Heart!

Tuition: \$90

Materials Fee: \$8

Grade Level: 1st-3rd
